EARTHMOVER

INDUSTRIAL

The I-155TS2 is designed for today's industrial applications

- The large 16" diameter front pipe, large tapered trailing arms, heavy duty push-off system and large earthmoving tires make the I-155TS2 the strongest pull-type earthmover in its class.
- The I-155TS2's heaped & struck capacities are similar to our competitors 17 cu. yd. models.
- Two 29.5 x 25 28 ply tires roll easily through any & all conditions. The size of the tires provide superior flotation and climbing ability.
- The large two tire design hugs the ground at higher speeds, where our competitor's gang of tires can rock violently from side to side (duck walk).
- 5" x 20" Trunion mount provide quick blade response. This enables the operator to maintain constant tractor RPM's and ground speed, building bigger & quicker loads.
- Rugged rear quick hitch makes tandem hookup safe and easy.
